Re: K190485

Trade/Device Name: Kawasumi Multiple Sample Adapter with Pre-Attached Holder (MBCH)

Regulation Number: 21 CFR 862.1675

Regulation Name: Blood Specimen Collection Device

Regulatory Class: Class II

Product Code: JKA Dated: June 6, 2019 Received: June 11, 2019

Dear Lisa Michels:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. Although this letter refers to your product as a device, please be aware that some cleared products may instead be combination products. The 510(k) Premarket Notification Database located at https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpmn/pmn.cfm identifies combination product submissions. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the <u>Federal Register</u>.

Please be advised that FDA's issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act's requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Part

K190485 - Lisa Michels Page 2

801); medical device reporting (reporting of medical device-related adverse events) (21 CFR 803) for devices or postmarketing safety reporting (21 CFR 4, Subpart B) for combination products (see https://www.fda.gov/combination-products/guidance-regulatory-information/postmarketing-safety-reporting-combination-products); good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820) for devices or current good manufacturing practices (21 CFR 4, Subpart A) for combination products; and, if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.

Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21 CFR Part 807.97). For questions regarding the reporting of adverse events under the MDR regulation (21 CFR Part 803), please go to https://www.fda.gov/medical-device-problems.

For comprehensive regulatory information about medical devices and radiation-emitting products, including information about labeling regulations, please see Device Advice (https://www.fda.gov/training-and-continuing-education/cdrh-learn) and CDRH Learn (https://www.fda.gov/training-and-continuing-education/cdrh-learn). Additionally, you may contact the Division of Industry and Consumer Education (DICE) to ask a question about a specific regulatory topic. See the DICE website (https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance/contact-us-division-industry-and-consumer-education-dice">https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance/contact-us-division-industry-and-consumer-education-dice) for more information or contact DICE by email (DICE@fda.hhs.gov) or phone (1-800-638-2041 or 301-796-7100).

Sincerely,

for Nikhil Thakur

Telephone Number: (602)-935-2565

Email: I.michels@rcainc.com

Summary Date: July 3, 2019

Trade Name: Kawasumi Multiple Sample Adapter with Pre-Attached Holder (MBCH)

Common or Usual Name: Blood Specimen Collection Device

Regulation Number: 21 CFR 862.1675

Regulation Name: Blood specimen collection device

Product Code: JKA

Class: Class 2

Panel: Clinical Chemistry

Predicate Device: Becton Dickinson BD Vacutainer® Brand Multiple Sample Luer Adapter / BD Vacutainer® Safety-Lok Blood Collection Set with Pre-Attached Holder (K991088)

Device Description:

The Kawasumi Multiple Sample Adapter with Pre-Attached Holder (MBCH) is a sterile, single-use device consisting of a plastic holder with a non-patient contacting stainless steel cannula covered with a rubber sheath and a male luer adapter which is attached into the holder. This device is used to collect blood specimen by connecting to female luer connectors of vascular access devices such as peripheral, central catheter, Huber needle, etc. As this device can be connected to various devices with female luer adapter, it is called "multiple sample adapter".

When blood is collected, the blood collection tube is placed over the cannula, pushing the rubber sheath back, allowing blood flow. After obtaining the correct amount of blood, the blood collection tube is removed from the holder. When the blood collection tube is removed, the rubber sheath extends back over the cannula and stopping blood flow. Blood collection may be continued by connecting additional blood collection tubes, if required.

The device is sterilized using Ethylene Oxide. The device is a prescription-use device intended to be used in hospitals or healthcare facilities.

Indications for Use:

The Kawasumi Multiple Sample Adapter with Pre-Attached Holder (MBCH) is a sterile, non-invasive device used for connection with a female luer system and non-needle devices in order to collect blood specimen to blood collection tube.

Feature of the Device Product Code Classification	Subject Device: Kawasumi Multiple Sample Adapter with Pre-Attached Holder (MBCH) JKA 21 CFR 862.1675	Primary Predicate: BD Vacutainer® Brand Multiple Sample Luer Adapter / BD Vacutainer® Safety-Lok Blood Collection Set with Pre-Attached Holder (K991088) JKA 21 CFR 862.1675	Discussion/Comment: Same Same
Number of Uses Materials	Single-Use Rx Only Hub: Polycarbonate (PC)	Single-Use Rx Only Hub: Polystyrene	Same Biocompatibility Testing and Performance Testing was conducted to demonstrate SE.
	Cannula: Stainless Steel Glue: Epoxy Silicon: Silicon Oil Sheath: Isoprene Rubber Not made with Natural Rubber Latex Holder: Polypropylene (PP)	Cannula: Stainless Steel Glue: Epoxy Silicon: Silicon Oil Sheath: Isoprene Rubber Not made with Natural Rubber Latex Holder: Polypropylene (PP)	Same Same Same Same
Biocompatibility Sterilization Method	Complies with ISO 10993 Ethylene Oxide	Complies with ISO 10993 Ethylene Oxide	Same Same
Indication for Use	The Kawasumi Multiple Sample Adapter with Pre- Attached Holder (MBCH) is a sterile, non-invasive device used for connection with a female luer system and non-needle devices in order to collect blood specimen to blood collection tube.	The Vacutainer Brand Multiple Sample Luer Adapter / BD Vacutainer® Safety-Lok Blood Collection Set with Pre-Attached Holder is a sterile, non-invasive device used to connect venous access device such as needles, blood collection sets, and infusion sets to blood collection tubes. They are also used in connection with non-needle devices for collection of blood from catheters. The Vacutainer Brand Luer Adapter is sold by itself and as a component of other Vacutainer Brand devices.	Similar-The difference is in the name of the device, this does not raise any questions of safety or effectiveness.
Design Feature	Gauge: 20G Length: 64.1 mm Width (A): 31.1 mm Width (B): 23.6 mm	Gauge: 20G Length: 64.3 mm Width (A): 30.5 mm Width (B): 24.9 mm	Non-Clinical Performance Testing was conducted to demonstrate SE.

Technological Characteristics:

The Subject Device and the Predicate Device have similar technological characteristics. Both devices are sterile, single-use, non-invasive devices with a Pre-Attached Holder used for connection with a female luer system and non-needle devices in order to collect blood specimen to blood collection tube.

The Kawasumi Multiple Sample Adaptor with Pre-Attached Holder (MBCH) (Subject Device) is substantially equivalent to the Becton Dickinson Vacutainer Brand Multiple Sample Luer Adapter / BD Vacutainer® Safety-Lok Blood Collection Set with Pre-Attached Holder (K991088) (Predicate Device) with regard to technologic characteristics, materials, performance and intended use.

Non-Clinical Testing:

Non-Clinical Performance Testing was performed to ensure that the device meets design requirements and specifications and to confirm performance of the Kawasumi Multiple Sample Adaptor with Pre-Attached Holder (MBCH).

Test Name	Test Description		
Comparative Testing	Comparative Evaluation Testing was conducted to verify that the Kawasumi Multiple Sample Adapter with Pre-Attached Holder (MBCH) has equivalent function and performance as the predicate device, the Becton Dickinson BD Vacutainer® Safety-Lok Blood Collection Set with Pre-Attached Holder (K991088). This Comparative Evaluation Testing assessed the following criterion of the subject and predicate devices: • Appearance and Measurement • Attachment and Detachment • Pressure Resistance • Connection Strength • Vacuum Tube Insertion and Removal		
	 Vacuum Tube Insertion and Removal Chemical Resistance 		
Shelf Life Evaluation	 Physical Testing - Accelerated Aging Testing was conducted on the Kawasumi Multiple Sample Adapter with Pre-Attached Holder (MBCH) [0 Month] / [6 Months] and [36 Months]. Biocompatibility Testing was conducted on the Kawasumi Multiple Sample Adapter with Pre-Attached Holder (MBCH) in accordance

- Cytotoxicity Testing per ISO 10993-5:2009 Biological Evaluation of Medical Devices – Part 5: Tests for In Vitro Cytotoxicity
- Sensitization Testing per ISO 10993-10:2010 Biological Evaluation of Medical Devices – Part 10: Tests for Irritation and Skin Sensitization
- Irritation or Intracutaneous Reactivity Testing per ISO 10993-10:2010 Biological Evaluation of Medical Devices – Part 10: Tests for Irritation and Skin Sensitization
- Acute Systemic Toxicity Testing per ISO 10993-11:2017
 Biological Evaluation of Medical Devices Part 11: Tests for Systemic Toxicity
- Material-Mediated Pyrogenicity Testing per USP General Chapter <151> Pyrogen Test and ISO 10993-11:2017 Biological Evaluation of Medical Devices – Part 11: Tests for Systemic Toxicity
- Hemocompatibility Testing per ASTM F756-17 Standard Practice for Assessment of Hemolytic Properties of Materials and ISO 10993-4:2017 Biological Evaluation of Medical Devices – Part 4: Selection of Tests for Interactions with Blood

Conclusion:

Based on the Non-Clinical Performance Testing conducted on the subject device, intended use, and priciples of operation it may be concluded that the Kawasumi Multiple Sample Adapter with Pre-Attached Holder (MBCH) (Subject Device) is substantially equivalent to the legally marketed Predicate Device.
